

Pimpri Chinchwad Education Trust's

[PCET-A trusted brand in Education Since 1990]

Pimpri Chinchwad College of Engineering

(An Autonomous Institute, affiliated to Savitribai Phule Pune University)

Curriculum Structure & Syllabus of

FY B.Tech

Computer Engineering

(Regional language -Marathi)

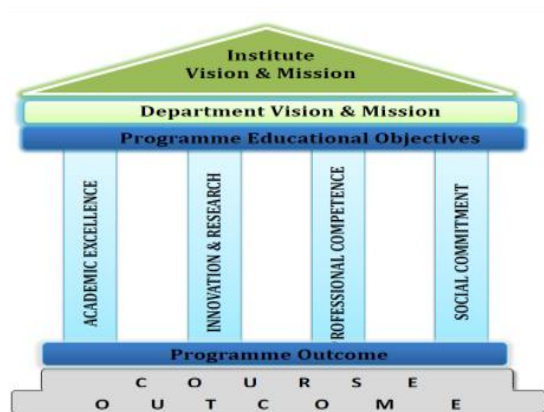

Department of Applied Sciences & Humanities

(Course 2020-21)

With effect from Academic Year 2021-2022

(Updated with Minor Changes)

Institute Vision

To Serve the Society, Industry and all the Stakeholders through the **Value-Added Quality Education.**

Institute Mission

To serve the needs of society at large by establishing State-of-the-Art Engineering, Management and Research Institute and impart attitude, knowledge and skills with quality education to develop individuals and teams with ability to think and analyze right values and self-reliance.

Quality Policy

We at PCCOE are committed to impart Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders. We shall strive for academic excellence, professional competence and social commitment in fine blend with innovation and research. We shall achieve this by establishing and strengthening state-of- the-art Engineering and Management Institute through continual improvement in effective implementation of Quality Management System.

Prior knowledge of :							
1. Elementary Mathematics. 2. Elementary Calculus.							
Course Objectives: This course aims at enabling students,							
1. To familiarize with concepts and techniques in Calculus and Matrices.							
2. To get acquainted with Mathematical Modelling of physical systems using differential equations.							
3. To acquire techniques of advanced level mathematics and its applications that would enhance analytical thinking power.							
Course Outcomes: After learning the course, the students will be able to:							
1. Apply the concept of rank to solve linear equation systems and analyze electrical circuits.							
2. Evaluate Eigen Values and Eigen Vectors to diagonalize the matrix and find natural frequencies & modes of vibrations.							
3. Apply the intermediate value theorems for continuous functions.							
4. Expand a function in infinite series using Taylor's and Maclaurin's theorems and apply L'Hospital rule to evaluate the limits of indeterminate forms.							
5. Solve ordinary differential equations of first order and first degree using appropriate techniques.							
6. Develop mathematical model and analyze different problems related to electrical circuits, cooling problems, rectilinear motion and heat flow.							
Detailed Syllabus:							
Unit	Description						Duration (Hrs)
I	Matrices-I: Rank, normal form, system of linear equations with applications in Electrical circuits, linear dependence and independence, linear and orthogonal transformations.						6
II	Matrices-II: Eigen values, Eigen vectors, Cayley – Hamilton theorem, diagonalization, application to problems to mass spring system.						6
III	Differential Calculus-I: Rolle's theorem, Lagrange's mean value theorem, Cauchy's mean value theorem, Successive differentiation, Leibnitz theorem, application to find curvature.						6
IV	Differential Calculus-II: Taylor's series, Maclaurin's series, Indeterminate forms, L' Hospital rule, evaluation of limits.						6
V	Differential equations: Exact differential equations, differential equations reducible to Exact form, Linear differential equations, differential equations reducible to Linear form.						6
VI	Application of DE: Applications of differential equations to orthogonal trajectories, Kirchoff's law of electrical circuits, rectilinear motion, one-dimensional conduction of heat, Newton's law of cooling.						6
	Total						36
Text Books:							
1. Higher Engineering Mathematics by B.V. Ramana , 34e, Tata McGraw-Hill.							
2. Linear Algebra & Univariate Calculus by Team Mathematics, PCCoE, Pune, 1e, Techknowledge Publication.							

Reference Books:

1. Advanced Engineering Mathematics by Erwin Kreyszig, 9e, Wiley Eastern Ltd .
2. Higher Engineering Mathematics by H. K. Dass , 22e, S. Chand Publication, Delhi.
3. Advanced Engineering Mathematics by S.R.K. Iyengar, Rajendra K. Jain, 4e, Alpha Science International, Ltd.
4. Advanced Engineering Mathematics, by Peter V. O'Neil, 7e, Thomson Learning.
5. Advanced Engineering Mathematics by M. D. Greenberg, , 2e, Pearson Education.
6. Higher Engineering Mathematics by B. S. Grewal, 43e, Khanna Publication, Delhi.

Lecture	Practical	Tutorial	Credit	Continuous Evaluation	MTE	ETE	Total
4	-	-	4	20	30	50	100
Prior knowledge of: <ol style="list-style-type: none"> 1. Structure of water. 2. Volumetric analysis. 3. Electromagnetic radiations. 4. Classification and properties of polymers. 5. Fossil and derived fuels. 6. Corrosion and its effects. 7. Electrochemical series. 							
Course Objectives: <ol style="list-style-type: none"> 1. To familiarize students with instrumental methods for qualitative and quantitative analysis and explore the importance of green chemistry. 2. To lead students to investigate the advancement in engineering materials, batteries and structural elucidation by spectroscopy. 3. To build consciousness about the recent development in alternate energy sources and corrosion control. 4. To develop experimental skills and thereby forge their conceptual lucidity. 							
Course Outcomes: After learning the course, students will be able to <ol style="list-style-type: none"> 1. Analyze the water quality, interpret techniques of water purification and compare green over traditional chemical synthesis. 2. Apply basic principles of various electro-analytical techniques for qualitative and quantitative analysis and understand battery technology. 3. Apply the principles, instrumentation of UV & IR spectroscopy for structural elucidation. 4. Interpret the chemical structure, properties and synthesis of various polymers and nano materials and their uses. 5. Perceive and analyze fuel quality and identify the scope of derived alternate fuels. 6. Apply the preventive methods of corrosion to real-life problems. 							
Unit	Description						Duration (Hrs)
I	Water Technology and Green Chemistry. Impurities in water, hard water, hardness of water, its types, units of hardness and hardness calculation. Chemical analysis of water by determination of hardness by EDTA method. Alkalinity of water and its determination. Numericals on EDTA method and alkalinity. Disadvantages of hard water in boilers. Water softening techniques: Permutit and Ion exchange method. Water purification by reverse osmosis and electro-dialysis. Dissolved oxygen (DO), biological oxygen demand (BOD) and Chemical oxygen demand (COD). Introduction of Green Chemistry: Definition, goals, principles and green synthesis of Polycarbonate.						8
II	Instrumental Analysis and battery technology. a) Electrochemistry: fundamentals of an electrochemical cell, EMF of cell, reference and indicator electrodes and Nernst Equation. b) Basic principles, instrumentation and applications of :- i) Conductometry: introduction, Kohlrausch's law, measurement of conductance and conductometric titrations of strong acid versus strong base, strong acid versus weak base and weak acid versus strong base. ii) pHmetry: theory of buffers and preparation, standardization of pH-meter, titration of weak acid versus strong base, simple and differential plots. iii) Potentiometry: Introduction, principle and application: potentiometric titration of Fe ²⁺ versus Ce ⁴⁺ along with simple and differential plots. Battery technology: introduction and types of batteries, construction, working and applications of Lithium ion battery, charging and discharging reactions at respective electrodes.						8

III	<p>Spectroscopic techniques: Ultra Violet and IR spectroscopy</p> <p>a) UV Spectroscopy: nature of electromagnetic radiation and its characteristics. Interaction of matter with UV radiations leading to different electronic transitions. Beer's & Lambert's law, their derivations and applications. Instrumentation of UV -Visible spectrophotometer. Terms used in UV spectroscopy-chromophore, auxochrome, bathochromic shift (red shift), hypochromic shift (blue shift), hyper chromic and hypochromic effect.</p> <p>b) IR spectroscopy: principle, types of vibrations (stretching and bending), Hooks law. Different regions of IR spectrum such as fundamental group region, finger print region and aromatic region. Instrumentation of IR spectrophotometer with applications.</p>	8
IV	<p>Chemistry of Polymers and Novel Carbon Compounds</p> <p>a) Polymers : definition, classification of polymers on the basis of thermal behavior, properties of polymers: degree of polymerization, crystallinity, Tg & Tm and factors affecting Tg, reaction mechanism of free radical and condensation polymerization with suitable examples. Advanced polymeric materials: Structure, properties and applications of liquid crystal polymer – Kevlar, conducting polymers -Polyacetylene, electroluminescent polymer - PPV, biodegradable polymers - PHBV, polymer composite -fibre reinforced polymer and recycling of polymers.</p> <p>b) Nanomaterials: definition,types of nanomaterials and properties of nanomaterials. Quantum dots, structure, synthesis, properties and applications of CNTs, Fullerenes and Graphene.</p>	8
V	<p>Fuels and combustion</p> <p>a) Fuels: definition, classification of fuels, calorific value and its units. Calorific value (CV), gross calorific value (GCV), net calorific value (NCV). Determination of calorific value - Bomb calorimeter, Boy's colorimeter and numerical.</p> <p>i) Solid fuels: coal, classification of coal, proximate and ultimate analysis of coal, numerical based on analysis of coal. ii) Liquid fuels: origin of petroleum, composition of petroleum, refining of petroleum, Octane number of petrol and Cetane number of diesel. Synthesis reaction, properties, advantages and disadvantages of Power alcohol and Biodiesel.</p> <p>iii) Gaseous fuels: Hydrogen gas as a future fuel, production by steam reforming of methane and coke, storage and transportation. H₂- O₂ fuel cell.</p> <p>b) Combustion: chemical reactions, calculations on air requirement for combustion.</p>	8
VI	<p>Corrosion and Corrosion control</p> <p>a) Corrosion: introduction, types of corrosion, mechanism of atmospheric corrosion and wet corrosion. Electrochemical and galvanic series. Factors affecting corrosion: nature of metal and nature of environment. Different types of corrosion: Pitting corrosion, concentration cell corrosion, stress corrosion and soil corrosion.</p> <p>b) Corrosion control: methods of prevention of corrosion - cathodic and anodic protection, metallic coatings and its types - anodic and cathodic coatings. Method to apply metallic coatings - hot dipping, cladding, electroplating and cementation. Non-metallic coating - powder coating.</p>	8

Course: Basic Electrical and Electronics Engineering				Code: BEFE1304			
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	Continuous Evaluation	MT E	ETE	Total
2	-	-	2	20	30	50	100
Prior Knowledge of: <ol style="list-style-type: none"> 1. Electron theory 2. Ohms law 3. Magnetism 4. Number system 5. Semiconductor theory 							
Objectives: <ol style="list-style-type: none"> 1. To provide working knowledge for the analysis of basic DC circuits. 2. To build strong conceptual understanding of single phase and polyphase AC circuits with phasor diagram representation. 3. To impart basic knowledge for conceptual understanding of DC and AC machines. 4. To introduce fundamental concepts of analog and digital electronics. 							
Outcomes: After learning the course, students will be able to <ol style="list-style-type: none"> 1. Apply the knowledge of DC circuits to solve the complex networks and to define the various terms related to magnetic circuits. 2. Apply the knowledge of single phase and three phase circuits to determine unknown electrical quantities. 3. Demonstrate the constructional features and operational details of DC and AC machines. 4. Identify type of diodes, transistor configurations as well as to build and test digital circuits using logic gates and flipflops. 							
Detailed Syllabus				(UG – 4 Units)			
Unit	Description						Duration (Hrs)
I	Chapter 1: Electric and magnetic circuit Electric Circuits: Classification of electrical networks, Source transformation, Simplification of networks using series and parallel combinations, Star delta transformation, Kirchhoff's laws (loop Current analysis), Magnetic Circuit: Flux, flux density, reluctance, MMF, permeability and field strength, their units and relationships; comparison of electric and magnetic circuit, Series magnetic circuit with air-gap.						6
II	Chapter 2: Single and three phase AC circuits Single phase AC Circuits: AC Quantities, Single phase ac circuit analysis (R, L, C, R-L-C series) on the basis of impedance, admittance, concept of active, reactive, apparent power and power factor etc. Three phase AC Circuits: Introduction to 3 phase supply and its necessity, balance three phase system, relation between line and phase quantities (with phasor diagram), power in three phase circuits for star and Delta connection						6
III	Chapter 3: DC and AC machines DC Machines: Construction, working principle of D.C. generator, emf equation of D. C. generator (derivation not expected), working principle of D.C. motor, types of D.C. motor, Back emf (Numerical), Industrial applications. AC Machines: Single phase transformers: Construction, operating principle, emf equation, voltage and current ratios. Losses, Efficiency and regulation, Auto-transformer.						6
IV	Chapter 4: Analog and digital electronics Analog Electronics Diode: Ordinary Diode, LED, Photodiode and Zener Diode: Construction, symbol, working,						6

	<p>characteristics, applications etc.</p> <p>Transistor: construction, types, operation; transistor configuration (CE, CB and CC): characteristics.</p> <p>Digital Electronics</p> <p>Logic Gates: Fundamental, derived and exclusive logic gates: symbol, operation, truth table, timing diagram; concept of universal gates</p> <p>Combinational Logic Circuit: Reduction of digital expressions by Boolean algebra and De Morgan's Theorem, half and full adder</p> <p>Sequential Logic Circuit: Flip – Flop (SR, JK & T): construction, working, truth table; types of Triggering.</p>	
	Total Hrs.	24

Text Books:

1. "Theory and problems of Basic Electrical Engineering" by I. J. Nagrath and Kothari (PHI learning Pvt.Ltd), Eastern Economy Edition.
3. "Fundamentals of Electrical Engineering" by Ashfaq Husain ,4th Edition. (Dhanpat Rai &Co.),
4. "Basic Electrical Engineering" by V. N. Mittal and Arvind Mittal, 2nd Edition. (McGrawHill),
5. "Basic Electrical Engineering" by V.K. Mehta, 1st Revised Edition (S. Chand & Co. Pvt. Ltd. NewDelhi)..
7. "Electronics Devices" by Thomas. L. Floyd, 9th Edition, Pearson
8. "Modern Digital Electronics" by R.P. Jain, 4th Edition, Tata McGrawHill

Reference Books:

Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	Internal Evaluation	MTE	ETE	Total
1	-	-	1	-	20	30	
Detailed Syllabus:							
Unit	Description						Duration (Hrs)
I	Problem Solving Using Computers: General problem solving strategies, Top down design, Introduction to program, Planning tools- algorithm, flowcharts, and pseudo codes. Introduction to Logic Structures: Sequential structure, Decision Structure, Loop Structure.						2
II	Introduction to C Programming: Features of C, basic concepts, structure of C program, program, declarations, variables, data types, expressions, operators assignment, arithmetic, relational, logical, increment and decrement, precedence of operators, type conversions, scanf and printf functions. Case Study: Exchanging the values of two variables, summation of a set of numbers.						2
III	Decision Control Structures in C: if-else, nested if-else, cascaded if-else and switch statement. Case Study: Finding square root of a number. Loop Controls Structures in C: Conditional control structures: for, while do-while Unconditional control structures: break, continue, goto statement. Case Study: Factorial of a given number, Generation of the Fibonacci Sequence, Reversing the digits of an integer.						4
IV	Arrays: Declaration initialization of one dimensional Array, two dimensional array, accessing array elements, Character Array/String, Character - Handling Library Functions, Standard Input/Output Library Functions for string. Case Study: Finding maximum number from given array, removal of duplicates from an ordered array.						4
Total							12

Course :		Workshop Practices		Code :		BFE1303	
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	TW	OR	PR	Total
-	2	-	1	50	-	-	50
Prior Knowledge of : 1. Algebra 2. Geometry							
Course Objectives: 1. To introduce various machine tools and demonstration on machining 2. To introduce different materials in engineering practices with respect to their workability, formability and machinability. 3. To develop skills through hands on experience.							
Course Outcomes: After learning the course, the students will be able to: 1. Select various manufacturing processes for given material. 2. Use various hand tools and basic measuring instrument used for carpentry, welding, fitting, and sheet metal operation. 3. Identify advanced manufacturing processes. 4. Apply safety practices on shop floor.							
List of Experiments: 1. Introduction to safety measures. 2. Demonstration of Manufacturing processes (Machining: Turning, Drilling, Milling and grinding using one simple machine component and sheet metal operations): Working, operation and types 3. Demonstration of sand casting and plastic molding: Preparation of sand mold and molding of simple plastic component 4. Finishing, inspection and assembly of machine components using different tools (Finishing, assembly) and measuring instruments. (For jobs made during preceding practical) 5. Demonstration of Advanced Manufacturing processes (CNC Machining, Additive manufacturing using one simple machine component) 6. Demonstration of electrical and electronic component assembly 7. Carpentry-1 Job involving joint and wood turning 8. Fitting – 1 Job involving fitting to size, male female fitting with drilling and tapping. 9. Joining – 1 Job involving welding (Arc), soldering, brazing etc. 10. Dismantling and Assembly of simple machines.							
Note: 1. Assignment one is mandatory. 2. Any four from experiment number 2to 6. 3. Students willperformany two utility jobs from experiment number 7 to 10.							
Submission: Two jobs as mentioned above and write up of demonstration with sketches/illustration.							
Reference Book: 1. Hajara Choudhari, Bose S.K. – Elements of workshop Technology Vol. I & II, Asian Publishing House. 2. Raghuvanshi, B. S. - Workshop Technology. Vol. 1 & 2, Dhanpat Rai & Co. (P) Ltd, Delhi. 3. P. N. Rao - Manufacturing Technology Volume I & II, McGraw Hill Education (India) Private Limited.							

Course :		Mini Project with Basics of Innovations			Code : BFE1701		
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	TW	OR	PR	Total
-	4	-	2	50	-	-	50
Prior knowledge of:							
1. Knowledge of basic sciences till higher secondary level.							
Course Objectives:							
1. To inculcate learning by doing approach in Mini Project will promote long-term retention of material and replicable skill, as well as improve teachers' and students' attitudes towards learning.							
2. To engage students in rich and authentic learning experiences.							
3. To provide every student the opportunity to get involved either individually or as a group so as to develop the team skills and learn professionalism.							
Course Outcomes:							
After learning the course, the students should be able to:							
1. Understand concepts of discovery, invention, innovation and research.							
2. Identify projects relevant to societal needs/conservation of environment/scope of the subject.							
3. Apply the technological knowledge to design various feasible solutions.							
Detailed Syllabus:							
Unit	Description						Duration (Hrs)
1.	Research Paper: Conferences (national and international), journals (national and international), research paper (national and international), meaning of impact factor and citation index, Web of Science, Scopus, etc. Research Ethics: Plagiarism, authorship, use of language, protecting confidentiality, conflicts of interest. Literature Review: Effective searching of literature, summary of literature review.						2
2.	Structure of Concept Note: Title of an idea, introduction, brief description with sketch, goal and objectives, impact and uniqueness of idea, time required for developing the prototype, approximate cost analysis. Structure of Research Paper: Title and abstract, introduction, method, evaluation, conclusion, references, writing a research paper-style of writing and formatting.						2
3.	Introduction to Innovation: What is Innovation?, inter-disciplinary view, fundamental and applied with example and importance of both, engineering inventions, videos of great inventions						2
4.	Design Thinking: What is Design Thinking (DT)? Phases of DT, DT or 'Out of the Box' thinking, DT is an iterative and non-linear process, case studies.						2
5.	Intellectual property (IP): Introduction to IPR, overview & importance, patents, copyrights, role in commerce, importance, case studies in IPR. Patent Search: What is a patent search? Types of patent search, step to start a planet patent search, patent search in Google patent search						2
6.	Basics of Entrepreneurship: Introduction, types of entrepreneurs, process of entrepreneurship, theories of entrepreneurship, social responsibility of entrepreneur, startup policies.						2
	Total Hrs						12
Exercises:							
1. Identify International/National Journals in your project domain and patent search in Google patents							
2. Presentation based on literature survey for the project.							
3. Model/poster (A3 Size)/report writing/research article based on project.							
4. Demonstration/exhibition based on carried out work.							

Course: Engineering Chemistry Laboratory				Code : BFE1205			
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	TW	OR	PR	Total
-	2	-	1	50	-	-	50
Course Objective: <ol style="list-style-type: none"> 1. To help students to procure conceptual clarity of Engineering Chemistry through laboratory experiments. 2. To develop experimental skills to acquire insight into societal and environmental issues. 							
Course outcome: After learning this course Students will be able to: <ol style="list-style-type: none"> 1. Perform instrumental and non-instrumental experiments safely, collect and interpret the data and analyse the results. 2. Work effectively in team as well as independently to demonstrate excellent laboratory skills. 3. Acquire awareness of ethical, societal and environmental issues with green chemistry approach. 							
List of Experiments: (Any 10 experiments from the following list) <ol style="list-style-type: none"> 1. Determination of total hardness of water sample by EDTA method and softening using ion exchange resin. 2. Determination of total alkalinity of the water sample. 3. Titration of a mixture of weak acid and strong acid with strong base using a Conductivity meter. 4. To determine the dissociation constant of a weak acid (acetic acid) using pH meter 5. To determine the maximum wavelength of absorption of CuSO₄, verify Beer's law and find unknown concentration in the given sample. 6. Study Practical:- Structural identification of unknown compounds by UV and IR spectroscopy.. 7. To prepare the Phenol formaldehyde resin or polypropylene. 8. Proximate analysis of Coal. 9. To determine the Electrochemical equivalent (ECE) of Cu. 10. Study of corrosion of metals in a medium of different pH. 11. Chromatographic separation of ortho- and para nitro-phenol. 12. Microwave assisted solid phase organic synthesis. 13. Soil analysis. 							
Laboratory manual : <ol style="list-style-type: none"> 1. Vogels Text book of Qualitative Chemical Analysis by J.Mendham, R.C,Denny, J.D.Barnes, M.J.K.Thomas, 6 e, Pearson Education Ltd. 2. Applied Chemistry Theory and Practice by O.P.Virmani and A.K.Narula, 2e, New age International (P) Ltd. 							

Course : Basic Electrical and Electronics Engineering laboratory				Code :	BEFE1305		
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	TW	OR	PR	Total
-	2	-	1	50	-	-	50

Course Objectives:

1. To impart Comprehensive understanding of the fundamentals of electrical and electronic circuits.
2. To provide working knowledge for the analysis of basic DC and AC circuits.
3. To provide hands on experience for conceptual understanding of DC machines, AC machines & measuring instruments.
4. To provide knowledge of Building, Testing and analyzing concepts of basic electronic circuits

Course Outcomes:

After learning the course, students will be able to

1. Be familiar with electrical safety, measuring instruments and energy calculations.
2. Demonstrate AC and DC circuits/ machines by performing different experiments.
3. Verify the theoretical characteristics of diodes, transistors experimentally and construct logic circuits.

List of Experiments:

Group A

From following any **three** Practical are to be study:

1. To study of various wiring accessories, earthing system and safety precautions while working with electrical systems.
2. Study of Electricity bill of LT consumer.
3. Study of Different parts of DC Machine.
4. To study various electronics circuit components and allied accessories.
5. To study digital multimeter, digital trainer kit and CRO.

Group B

From following any **seven** Practical are to be performed:

1. To verify Kirchhoff law in a DC network
2. To measure steady state response of series RL and RC circuits on AC supply and observations of voltage and current waveforms.
3. To verify the relation between phase and line quantities in three phase balanced star and delta connections of load.
4. Perform load test on DC Shunt Motor to determine the efficiency.
5. Perform speed control of DC Shunt Motor to plot characteristics.
6. To determine efficiency and regulation of single-phase transformer by direct loading test.
7. To Plot V-I characteristics of P-N Junction Diode and Zener Diode.
8. To Plot input and output characteristics of CE Transistor configuration.
9. Implementation of Half Adder & Full Adder using Logic Gate IC's.
10. Verify its truth table SR, JK & T flip flops.

Course : Computer Programming and Problem Solving-I Laboratory				Code :		BFE1307	
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	TW	OR	PR	Total
-	4	-	2	50	-	-	50
Prerequisite: Students are expected to have a good understanding of basic computer principles.							
Objectives: 1. To illustrate use of programming language 2. To get acquainted with basic C programming constructs such as data types, variables, and operators. 3. To implement decision and looping using C programming. 4. To implement linear data structure using C programming.							
Outcomes: After learning the course, the students will be able to: 1. Construct a C program using data types, variables and operators. 2. Illustrate the use of conditional statements in the C programming language. 3. Apply the concepts of loops in C programs. 4. Implement a C program using array data structure to solve various applications. 5. Develop a program using different coding standards for given problem statement. 6. Design and develop C programming solutions for real world problems as a team.							
Assignment No.	Suggested List of Assignments						Duration (Turns)
GROUP A (Any 5)							
1	Write a program to calculate salary of an employee given his basic pay (take as input from user). Calculate gross salary of employee. Let HRA be 10% of basic pay and TA be 5% of basic pay. Let employee pay professional tax as 2% of total salary. Calculate net salary payable after deductions.						1
2	Write a program to accept an object mass in kilograms and velocity in meters per second and display its momentum. Momentum is calculated as $e=mv$ where m is the mass of the object and v is its velocity.						
3	Write a program to accept two numbers from user and compute smallest divisor and Greatest Common Divisor of these two numbers.						1
4	Given a number N and power P, write a program to find the exponent of this number raised to the given power, i.e. N^P .						
5	Write a program to accept total number of minutes as input and then output as hrs + minutes. Ex:- 90 minutes = 1 hour 30 minutes						1
6	Write a program to read the coordinates (x, y) (in Cartesian system) and find the quadrant to which it belongs (Quadrant -I, Quadrant -II, Quadrant -III, Quadrant -IV).						
7	Write a program that will read an integer number and check whether it is an EVEN or ODD number.						1
8	A hotel has a pricing policy as follows:- Stay for 2 person : 2500Rs. per night Stay for 3 person : 3500Rs. per night Stay for 4 person : 4500Rs. per night Additional person : 1000Rs. per person per night If the customer is staying on company business tour, there is a 20% discount. Take the number of people, number of night staying, if it's business tour or not as input						

	from user. Write a program to calculate and print the cost of the room.	
9	Write a program that extracts and prints the rightmost digit of the integer value.	
10	Write a program to accept marks of five courses and compute the result. If student scores aggregate greater than 75%, then the grade is distinction. If aggregate is 60>= and <75 then the grade is first division. If aggregate is 50>= and <60, then the grade is second division. If aggregate is 40>= and <50 then the grade is third division. If aggregate is < 40 then student is fail.	1
11	Write a program to check two given integers, and return true if one of them is 30 or if their sum is 30 using conditional operator.	
12	Write a program to find the largest number using ternary operator among : two numbers, three numbers, four numbers.	1
13	Write a program to print the number of months (use 30 days to a month) and remaining days given the number of days between two dates.	1
14	Write a program to accept number from 1 to 7 and print equivalent day of the week (i.e. 1 Monday).	1
15	Write a program to simulate simple calculator that performs basic tasks such as addition, subtraction, multiplication and division with special operations like computing x^y and $x!$.	1
GROUP B (Any 2)		
16	Accept details of a student like name and address. Write a program to print the details in uppercase.	1
17	Accept bank account number from user and identify the last four digits of the account number. Write a program to print the last four digits from the account number separately. For example:- Input: 1000678954 Output:- 8 9 5 4	1
18	Write a program to check whether given number is Prime or not. Take a number as input from user.	1
19	Write a program to print the Fibonacci series. Accept the range of Fibonacci series from user as input.	1
20	Write a program to check whether the input number is Armstrong number or not. An Armstrong number is an integer with three digits such that the sum of the cube of the three digits is equal to the number itself. Example :- 371	1
21	Write a program to calculate the sum of all numbers from 1 to 100 that are divisible by 4	
22	Write a program to generate a series of numbers from 1 to 10 and print these series in the shape of a pyramid.	1
23	An instructor calculates the grade percentage based on the highest score on a test. Given the highest score and one student's score, write a solution to calculate and print that student's test percentage.	1
GROUP C (Any 3)		

24	Write a program to accept n number of element from user (where, n is specified by user) and stores data in an array and display the largest element of that array using loops.	1
25	Write a program to accept details of two matrices. Add and multiply given matrices and print the result.	1
26	Accept a string from user. Write a program to find the frequency of characters in a string.	1
27	Write a program to accept a string from user. Using a loop iterate over the character of the string and remove all characters from string except the alphabets. Print the final string.	1
28	Write a program to find the length of a string, concatenate two strings, copy string using string library functions.	1
29	Consider you have created a website in which you are accepting details of users where you have to take password from user. Write a program to accept password from user with following condition: 1. Minimum characters 6 and maximum are 12. 2. Atleast one digit and one character. 3. Atleast one special symbol (@, \$, #) .	2
30	Write a program to accept a string and replace all the vowels in the string with '*'. Display the updated string.	1
	**** Implement a Mini Project to use all the concepts of C Programming and Problem solving. **** (Subject Activity)	
	Total	24
Remark: Implementation of all assignments is encouraged.

Prior Knowledge of: 1. Basic Knowledge of English grammar. 2. Basic Vocabulary, Listening and Speaking Skills							
Course Objectives: 1. To develop listening and speaking skills for effective communication. 2. To develop a sense of confidence among students to present themselves at professional as well as societal levels. 3. To enhance language competence.							
Course Outcomes: After learning the course, students will be able to 1. Formulate grammatically correct and meaningful sentences to communicate effectively 2. Understand the word-formation process, word nuances and enrich vocabulary to express effectively 3. Develop effective listening skills and comprehension skills 4. Present themselves and communicate confidently in front of large audiences in a variety of situations							
Detailed Curriculum							
Unit	Description						Duration (Hrs)
I	Application of Basic Grammar: Articles, Prepositions, Tenses, Subject-verb agreement, Use of phrases & Clauses in sentences, Common errors						3
II	Vocabulary Enrichment: Ways of word formation, Foreign phrases, One word substitutions, Synonyms & antonyms, Words often confused, Indian English words, Usage of idioms & phrases.						3
III	Listening Skills: Importance of listening skills, Listening V/s hearing, Types of listening: active / selective / passive listening, Barriers to listening, Techniques of effective listening. Comprehension: Introduction to comprehension, Types of comprehension: literal comprehension, Inferential comprehension						3
IV	Speaking Skills: Fluency and accuracy - pronunciation, Intonation, Stress and rhythm, Neutral accent, Extempore, Effective public speaking						3
	Reference Books: 1.Sharma, G.V.L.N., <i>English for Engineering Students</i> . 2. Prior Knowledge of: <ol style="list-style-type: none"> To make use of learnt English/Marathi/Hindi language for learning Japanese language. Willingness to learn a foreign language and positive attitude towards the language and culture of Japan. 							
Course Objectives: <ol style="list-style-type: none"> To make students aware about Japanese Scripts (Hiragana,Katakana) and basic Kanjis. To make students familiarize themselves with the Japanese language and use basic greetings in day-to-day life. Students will develop language skills namely speaking, reading and writing skills for socializing, providing and obtaining information. To make students able to express themselves using basic sentences. To develop cross cultural skills and understanding of gestures, family and community, perceptions. 							
Course Outcomes: After learning the course, the students will be able to: <ol style="list-style-type: none"> Demonstrate Japanese scripts through oral and written communication. Express themselves by using simple sentences and responses to questions. Explore Japanese greetings, culture and etiquette. Develop language skills namely speaking, reading and writing skills for providing and obtaining information. 							
Detailed Syllabus: (UG – 4 Units)							
Unit	Description						Duration (Hrs)
1	Introduction Speaking: Song of greetings. Listening: Short video skit on self-introduction. Writing: Japanese scripts (Hiragana) Reading: Hiragana words Test on Hiragana						8
2	Katakana script Speaking: Song on body parts. Listening: English words Writing: Locating countries on map , Word hunt. Reading: Katakana words Grammar: Test on Katakana						8
3	わたしは マイク. ミラー です。 Speaking: Self introduction Listening: Conversation based on L-1 Writing: Writing about yourself. Reading: Lesson reading no.-1 Grammar: Introduction to <ol style="list-style-type: none"> particles (は、か、も、か) Verb (です、ではありません) 						10
4	Speaking: Listening: Conversation based on L-2 Writing: Numbers (0-100) in Japanese. Reading: Lesson reading 2 Grammar: Verbs (past,negative form), introduction to <ol style="list-style-type: none"> questioning words(なん、だれ、どなた). この、その、あの、どの 						12

Prior knowledge of:							
1. Elementary Mathematics.							
2. Elementary Calculus.							
Course Objectives:							
1. To strengthen the concepts of multivariable calculus and its application in maxima & minima, error & approximation area, volume, CG and MI.							
2. To familiarize the students with continuous and discrete systems, where knowledge of Fourier series and Harmonic analysis is required.							
3. To make students acquainted with advanced techniques to evaluate integrals.							
Course Outcomes:							
After learning the course, the students will be able to:							
1. Evaluate Partial Differentiation and apply the concept of PD in Euler’s theorem.							
2. Apply partial differentiation to evaluate Jacobian, Maxima & Minima, and Error & Approximation.							
3. Apply Fourier series to represent the periodic time domain function to signal form.							
4. Evaluate definite improper integrals using techniques like Gamma, Beta function, DUIS, and Error function.							
5. Evaluate multiple integrals using the concepts of curve tracing.							
6. Apply multiple Integration techniques to analyze area, volume, CG & MI.							
Detailed Syllabus:							
Unit	Description						Duration (Hrs)
I	Partial Differentiation: Partial derivatives, Euler's theorem on homogeneous functions, implicit functions, and variable treated as constant, total derivatives.						6
II	Jacobian: Jacobians and their applications, errors, and approximations. Maxima and Minima: maxima and minima of functions of two and three variables.						6
III	Fourier Series: Definition, Dirichlet’s conditions, full range Fourier series, half range Fourier series, Harmonic analysis, and application to the engineering.						6
IV	Integral Calculus: Beta and Gamma functions, differentiation under integral sign (DUIS), Error functions.						6
V	Multiple Integration: Introduction of curve tracing, double integration, change of order of integration, conversion into polar form, Triple integration: with limits and without limits, Dirichlet's theorem.						6
VI	Application of Multiple Integration: Rectification of curves, Area, Volume, CG, and MI						6

4	-	-	4	20	30	50	100
Prior-knowledge of : 1. Wave theory of light 2. Elasticity 3. Atom, molecule & nuclei 4. Current, electricity & magnetism 5. Electromagnetic Induction							
Course Objectives: 1. To build strong conceptual understanding of Optics, Semiconductor Physics & Quantum Physics 2. To explore advances in Physics with introduction of Lasers, Nanotechnology & Superconductivity 3. To provide consciousness about the importance of Physics principles in various engineering applications							
Course Outcomes: After learning the course, students will be able to 1. Analyze intensity variation due to optical phenomena like interference and relate these concepts to various engineering applications 2. Analyze & interpret electrical behavior of materials & relate working of semiconductor devices with the concept of Fermi level 3. Apply working principle of lasing action & interpret working of lasers with its prominent applications 4. Interpret wave like behavior of matter and apply Schrodinger's wave equation to study quantum mechanical phenomenon 5. Interpret properties of superconductors & their applications in advanced technologies 6. Recognize properties, preparation methods of nanomaterials & explore their applications in various engineering fields.							
Detailed Syllabus (UG – 6 Units)							
Unit	Description						Duration (Hrs)
1	Wave Optics Interference: Interference, phase difference & path difference between waves, constructive & destructive interference, geometrical path & optical path, phase difference due to reflection at boundaries of optical interfaces, thin film, interference due to thin film of uniform thickness, conditions of maxima and minima, interference at wedge shaped film (without derivation), anti-reflection coating as an application of interference Diffraction: Diffraction, Fraunhofer diffraction at a single slit (Derivation)-condition of maxima and minima, resultant intensity distribution pattern, diffraction grating (Qualitative), Introduction to X-Ray diffraction						8
2	Semiconductor Physics Limitations of classical free electron theory, Kronig -Penny model (qualitative), band theory of solids, direct & indirect energy band gap, electrical conductivity of conductors & semiconductors, Hall effect (with derivation), Fermi Dirac probability distribution function, Fermi energy, position of Fermi level in intrinsic semiconductors (with derivation) & in						8

	extrinsic semiconductors, dependence of Fermi level on temperature & doping concentration, energy band diagram of P-N Junction diode, solar cell I-V characteristics	
3	Laser & Fiber Optics Laser: Introduction, interaction of light with matter- absorption, spontaneous emission, stimulated emission, population inversion, metastable state, active system, resonant cavity, characteristics of laser, semiconductor hetero-junction laser, carbon dioxide laser, applications of laser-industrial, defense & medical; introduction to holography Fiber Optics: Propagation of light in optical fibers, acceptance angle, numerical aperture, modes of propagation, types of fibers- step index, graded index, single mode & multi-mode; Losses -attenuation, dispersion	8
4	Quantum Mechanics Limitations of classical physics, need of quantum mechanics, wave particle duality of radiation & matter, De Broglie hypothesis, De Broglie wavelength in terms of kinetic & potential energy, concept of wave packet, phase and group velocity, properties of matter waves, Heisenberg's uncertainty principle, wave function & probability interpretation, well behaved wave function, Schrodinger's time independent wave equation, applications of time independent wave equation to the problem of (i) particle in rigid box, (ii) particle in a non-rigid box(qualitative), Tunneling effect, examples of tunneling effect -alpha decay, tunnel diode & scanning tunneling microscope (STM)	8
5	Magnetism and Superconductivity Magnetism: Classification of magnetic materials, temperature dependent magnetic transitions (Curie and Neel temperature), magnetic hysteresis loop, magneto-resistance, giant magneto-resistance (GMR), application of magnetic materials in magneto-optical recording, magnetocaloric effect, adiabatic demagnetization. Superconductivity: Introduction, critical temperature, properties of superconductors-zero electrical resistance, persistent current, Meissner effect, critical magnetic field, critical current, isotope effect, BCS theory, type I and II superconductors, low T _c and high T _c superconductors, Josephson effect, DC-SQUID-construction, working and applications, applications - superconducting magnets, maglev trains	8
6	Introduction to Nanoscience Introduction, surface to volume ratio, quantum confinement, properties of nanomaterials-optical, electrical, mechanical, magnetic; methods of preparation of nanomaterials- bottom-up and top-down approaches, physical methods- high energy ball milling, physical vapor deposition; chemical methods-colloidal method, chemical vapor deposition method (hybrid method); applications- aerogels-types, properties and applications, applications of nanomaterials in medical, energy, automobile, sensors, space, defense; introduction to quantum computing.	8

2	-	-	2	20	30	50	100
Prior knowledge of: 1. Basic principles of trigonometry 2. Geometry 3. Algebra 4. Linear differentiation and integration 5. Principles of Physics (equations of motions)							
Course Objectives: 1. To provide adequate knowledge of mechanics to formulate and analyse problems based on real life situations. 2. To make aware about basic concepts of statics and dynamics for rigid bodies. 3. To impart fundamental knowledge of analysis of structures, equilibrium of force system and friction. 4. To build conceptual understanding of principles of kinetics and kinematics to solve various engineering problems.							
Course Outcomes: After learning the course, students will be able to 1. Draw Free Body Diagram (FBD), resolve and compose forces and analyze simple and compound beams. 2. Apply concept of equilibrium to analyze friction, trusses, cables and space force system. 3. Determine centroid of plane lamina, moment of inertia for standard shapes & composite figures and apply equations of motion for rectilinear and curvilinear path. 4. Apply Newton's second law in different forms like work energy principle and impulse momentum equation.							
Detailed Syllabus:							
Unit	Description						Duration (Hrs)
I	Resultant and Equilibrium of Coplanar Force System Introduction and Principle of statics, force systems, resolution and composition of forces, resultant of concurrent forces, moment of a force, Varignon's theorem, couple, resultant of general force system, free body diagram, equilibrium of three forces in a plane, equilibrium of concurrent forces, types of beams: simple and compound beams, type of loads, types of supports, equilibrium of general force system.						6
II	Analysis of Structures , Friction and Space forces Two force members: analysis of plane trusses by method of joint, analysis of plane trusses by method of section, cables with supports at same level subjected to point loads, Friction: law's of friction, ladders friction and application to flat belt, equilibrium of concurrent and parallel forces in a space, resultant of concurrent and parallel forces in a space.						6
III	Centroid of Plane Lamina, Moment of Inertia and Kinematics of particle Centroid of plane lamina, applications of centroid, moment of inertia(MI), perpendicular axis theorem, parallel axis theorem, MI of standard shapes, MI of composite figures. Kinematics of particle: constant acceleration, motion under gravity, equations of motions in cartesian and path coordinates for curvilinear motion, projectile motion.						6

IV	Kinetics of Particle Kinetics of particle: Newton's second Law and its applications to rectilinear motion, curvilinear motion, and introduction to work energy principle and impulse momentum equation, direct and central impact, coefficient of restitution.	6

Prior knowledge of: 1. Basic geometry such as different types of planes, solids etc. 2. Virtual imagination.								
Course Objectives: 1. Develop imagination of physical objects to be represented on paper for engineering communication. 2. Develop the interpretation and manual drawing skills. 3. Develop the physical realization of the dimension of the objects. 4. Get basic hands-on training on computer aided drafting (CAD) tool.								
Course Outcomes*: After learning the course, students will be able to 1. Understand the concept of engineering graphics and draw the engineering curves 2. Read 3D engineering objects and draw orthographic projections 3. Read 2D engineering objects and draw isometric views 4. Analyze the 3D objects and draw development of lateral surfaces of solid *Attainment of the above course outcomes shall be computed on the basis of evaluation of theory and laboratory work of the same course.								
Detailed Syllabus (UG – 4 Units)								
Unit	Description						Duration (Hrs)	
I	Part A: Introduction to engineering drawing Importance of engineering drawing, introduction to drawing instrument and their uses, drawing sheet layout and its sizes, types of lines and their applications, dimensioning terminology and methods, quadrant and its positions, first angle and third angle projection method and their comparison. Part B: Engineering curves Ellipse, parabola, hyperbola by focus-directrix method and rectangle method, cycloid, involute, spiral & helix.						3	
II	Orthographic projections Orthographic projection of given pictorial view by first angle method of projection, types of sections, sectional orthographic projection (only full sectional orthographic view)						4	
III	Part A: Isometric view Isometric axes, scale, difference between isometric projection and isometric view, isometric view of simple solids and its dimensioning. Part B: Free hand sketching of innovative product Free hand sketching of any existing/innovative product e.g. concept vehicles, computer hardware, bridge design etc.						4	
IV	Part A: Development of lateral surface of solids Development of cut section of prism, pyramid, cylinder and cone using single cutting plane. Part B:Introduction to computer aided drafting Introduction to GUI of CAD software, basic operation of CAD software, use of various commands for drawing, dimensioning, editing, modifying and plotting.						2	
	Total Hrs						13

Course:		Computer Programming & Problem Solving-II				Code: BFE2316	
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	Internal Evaluation	MTE	ETE	Total
2	-	-	2	20	30	50	100
Prior Knowledge of: Computer Programming and Problem Solving-I							
Course Objectives: <div>1. To acquaint with the fundamental principles, concepts and constructs of computer programming.</div> <div>2. To develop competency for the logic, design, coding and debugging.</div> <div>3. To build the programming skills using 'C' to solve real world problems.</div> <div>4. To develop a simple application using C language.</div>							
Course Outcomes: After learning the course, the students will be able to: <div>1. Demonstrate the skills of the C programming language to implement various algorithms.</div> <div>2. Construct user defined functions to generate reusable and modularized code blocks.</div> <div>3. Interpret the concept of pointers, declarations, initialization, operations on pointers and their usage.</div> <div>4. Apply appropriate user defined data types in C programming such as structure, Union, enumeration.</div> <div>5. Design an algorithmic approach for real life complex problems with the use of searching and sorting techniques and compare their performance.</div> <div>6. Develop a mini project based on real life examples using 'C' construct.</div>							
Detailed Syllabus:							
Unit	Description						Duration (Hrs)
I	UserdefinedFunctionsin'C': Needforuserdefinedfunctions,Definitionoffunction,Returnval ues andtheirtypes,functioncalls,functiondeclaration,Categoryoffunctions,Noargumentsandnore turn values, Arguments with return values, no arguments but returns a value, function that return multiple values, nesting of functions, recursion.						6
II	Pointers in 'C': Declaring a pointer variable, Initialization of pointer variable, accessing a variable through its pointer, pointer expressions, Pointers and Arrays, Pointer and character strings, Array of Pointers, Pointer as function arguments. Functions returning pointers, pointers to functions, call by reference, passing array as function parameter, passing string as a function parameter, recursive function.						6
III	Structure and Union in C: Introduction to structure and enumeration, declaration of structure, initialization, declaration of structure variables and accessing members, structure and function, declaration of union and accessing members, array of structure, structure Pointers, type-def.						5
IV	Searching and Sorting Techniques: Searching Techniques: (Linear search, binary search), Comparisons of searching and their complexities. Sorting Techniques: Types of sorting, Internal and external sorting, General sort Concepts, Sort Order, Stability, Efficiency, Number of Passes. (Insertion sort, selection sort, bubble sort). Comparisons of sorting methods and their complexities.						7
	Total						24

Course:		Engineering Physics			Code:		BFE2203	
Teaching Scheme				Evaluation Scheme				
Lecture	Practical	Tutorial	Credit	TW	OR	PR	Total	
-	1	-	1	50	-	-	50	
Prior-knowledge of: 1. Wave theory of light 2. Elasticity 3. Atom, molecule & nuclei 4. Current, electricity & magnetism 5. Electromagnetic Induction								
Course Objectives: 1. To provide better understanding of concepts, principles of Physics by giving hands on experience 2. To develop an insight in scientific experimental methodologies								
Course Outcomes: After learning the course, students will be able to 1. Develop an ability to handle measuring instruments and understand uncertainty and errors involved in various measurements 2. Develop cognitive abilities such as predicting, observing, classifying, interpreting, inferring, verifying – by performing experiments related to optics, semiconductors, magnetism & Laser								
List of Experiments								
(Any 10 experiments from following list)							Duration (Hrs)	
1	Experiment based on Newton's rings (determination of wavelength of monochromatic light, determine the radius of curvature of Plano-convex lens)						2	
2	To determine unknown wavelength by using plane diffraction grating						2	
3	To verify Malus Law						2	
4	Any experiment based on Double Refraction (Determination of refractive indices, identification of types of crystal)						2	
5	Any experiment based on Laser (Thickness of wire, determination of number of lines on grating surface)						2	
6	To study IV characteristics of Solar Cell and determine fill factor						2	
7	To determine band gap of given semiconductor						2	
8	To determine Hall coefficient and charge carrier density						2	
9	To find out Magnetic susceptibility of given material						2	
10	Ultrasonic Interferometer: Determination of velocity of ultrasonic waves in given liquid and its compressibility						2	
11	Determination of specific rotation of a solution with Laurent's Half Shade Polarimeter						2	
12	Determination of electrical resistivity of given semiconductor using four probe method						2	
Text Books: 1. A text book of Engineering Physics-Dr. M.N. Avadhanulu, Dr. P.G. Kshirsagar- Revised edition 2015, S. Chand & Company Pvt. Ltd. 2. Engineering Physics-R. K. Gaur, S. L Gupta, -Eighth revised edition 2012, Dhanpatrai Publications(P) Ltd.								
Reference Books: 1. Lasers & nonlinear Optics-B. B. Laud-Third edition, New Age International (P)Ltd. Publishers. 2. Fundamentals of Optics- Francis A. Jenkins, Harvey E. White, Fourth edition, McGraw Hill Education (India) Pvt. Ltd.								

3. Fundamentals of Physics- Resnick & Halliday (John Wiley & sons)
4. An introduction to Laser's theory and applications – Dr. M. N. Avdhanulu, Dr. P.S. Hemne– Revised edition 2017-S. Chand & Company Pvt. Ltd.
5. Introduction to solid states Physics - Charles Kittel, Eighth Edition, Wiley India Pvt Ltd.

-	4	-	2	50	-	-	50	
Prior knowledge of: 1. Basic geometry such as different types of planes, solids etc. 2. Virtual imagination.								
Course Objectives: 1. Develop imagination of physical objects to be represented on paper for engineering communication. 2. Develop the interpretation and manual drawing skills. 3. Develop the physical realization of the dimension of the objects. 4. Get basic hands-on training on computer aided drafting (CAD) tool.								
Course Outcomes*: After learning the course, students will be able to 1. Understand the concept of engineering Graphics; Interpret and draw different types of engineering curves and their application. 2. Imagine, interpret, analyze and draw different orthographic views of solids and it's development 3. Imagine, interpret, analyze and draw Isometric view from given orthographic view. 4. Draw, edit and modify basic drawings by using various tool bars of CAD software. *Attainment of the above course outcomes shall be computed on the basis of evaluation of theory and laboratory work of the same course.								
List of Drawing Sheets: Sheet no. 1 to 6 should be drawn by students on A2 size drawing sheet and sheet no. 7 by using CAD software 1. Types of lines and dimensioning 2. Engineering Curves (min.5 problems) 3. Orthographic projections (min.2 problems) 4. Isometric views (min. 2 problems) 5. Free hand sketching of any existing/innovative product 6. Development of lateral surface of solids (min.3 problems) 7. One sheet using CAD software package (min. 2 problems)

8	<p>Write a program using array of structure for maintaining departmental library information book record (Accession number, title, edition, author and tag). The tag can be either purchase cost or name of the donor. Use union within structure for tag & display list of purchased and donated books separately.</p> <p>OR</p> <p>Write a menu driven program for a cricket player's display board. The information of the cricketer can be (not limited to) name, age, country, category (batsman, bowler, wicket keeper, all rounder), number of ODI's played, number of International 20-20's played, average batting score, total number of wickets taken, etc. (Use array of structure) perform following queries.</p> <ol style="list-style-type: none"> 1. Number of batsman of a particular country 2. Batsman with highest average score 3. Number of bowlers of a particular country 4. Bowler that has taken maximum no of wickets 5. Show a particular players entire "Display board information". 	2
9	Accept an array of integers; arrange the elements of this array in such a way that each element is smaller than its successor. As an example, array of integers: [5, 1, 4, 2, 3] Sort the array using insertion/selection/bubble sort, so that the final array obtained is [1, 2, 3, 4, 5].	1
10	Write a program to store student information (e.g. Roll No, Name, Percentage etc.). Display the data in descending order of Percentage (bubble sort). Display data for roll no specified by user (linear search).	2
	Total	2 4
Implement a Mini Project to use all the concepts of C Programming and Problem solving.		
Remark: Implementation of all assignments is encouraged.
